

ABSTRACT

A freight rack capable of reducing the mechanical load on a container and lighter in weight. An automobile rack 1, which is disposed in a container 3 carrying an automobile 2, can reinforce the container 3 from the inside. The freight rack 1 includes a base member 10 movable longitudinally in the container 3 together with the automobile 2 loaded thereon and a vertical bracing member 20 which is brought into contact with the inside upper part of the container 3 to exert an upward force on the container 3.
